

■ Features :

- Universal AC input / Full range (up to 305VAC)
- Built-in active PFC function
- Protections: Short circuit / Over current / Over voltage / Over temperature
- Cooling by free air convection
- Output constant current level adjustable
- · Class 2 power unit
- Three in one dimming function (1~10Vdc or PWM signal or resistance)
- · Suitable for built in LED lighting system
- Suitable for dry / damp locations
- 100% full load burn-in test
- 3 years warranty

■ Power Factor Characteristic

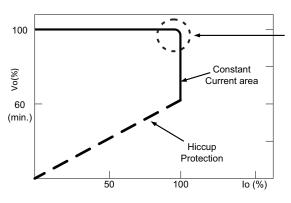

■ EFFICIENCY vs LOAD (48V Model)

HLP-60H series possess superior working efficiency that up to 90.5% can be reached in field applications.

■ DRIVING METHODS OF LED MODULE

This LED power supply is suggested to work in constant current mode area (CC) to drive the LEDs.

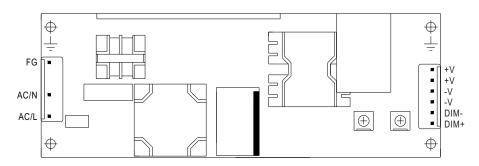

Typical LED power supply I-V curve

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems.

Should there be any compatibility issues, please contact MEAN WELL.

■ DIMMING OPERATION

- ※ Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output constant current level can be adjusted through output connector by 1~10VDC, PWM signal, or connecting a resistance

 → Output connecting between DIM+ and DIM-.
- * Please DO NOT connect "DIM-" to "-V".
- * Reference resistance value for output current adjustment (Typical)

XUsing the built-in dimming function can't turn the lighting fixture totally dark. Please refer to the connection method below to achieve 0% brightness ₹ of the lighting fixture connecting to the LED power supply unit.

Dimming connection diagram for turning the lighting fixture ON/OFF:

Using a switch and relay can turn ON/OFF the lighting fixture.

- 1.Output constant current level can be adjusted through output connector by connecting a resistance or 1~10Vdc or 10V PWM signal between DIM+ and DIM-.
- 2. The LED lighting fixture can be turned ON/OFF by the switch.
